 @GaneshBhat-201

 @Sriganesh.B.S

PURPOSE: Seeking an opportunity, to utilize my skills and abilities, in a value driven company that offers professional growth while being resourceful, innovative and flexible, driving myself toward the development of cutting edge technologies for future Indian technological landscape.

SKILLS

- ❖ **Java, C, C++, Python**
- ❖ **HTML, CSS, JavaScript, React.js**
- ❖ **Express.js, Node.js, MongoDB, SQL, Socket.io**
- ❖ **Bootstrap, Tailwind**

EXPERIENCE

- ❖ **Contributor | GirlScript Summer of Code (GSSoC'24)**
(May 2024 - Present)

Technologies : MERN Stack

GirlScript Summer of Code empowered me to dive into open-source development, collaborating with a vibrant community of peers and mentors. Through coding challenges and workshops, I sharpened my skills while fostering meaningful connections. It is being a transformative journey of growth, camaraderie, and learning, leaving me inspired to continue making an impact in the tech world.

EDUCATION

- ❖ **Computer Science Engineering | RNSIT, Bengaluru** **CGPA: 9.42 | 2026**
- ❖ **XII (State) | Jnana Sweekar PU college, Bengaluru** **98% | 2022**
- ❖ **X (State) | Jain Vidyaniketan, Kanakapura** **94.56% | 2020**

ACADEMIC PROJECT

- ❖ **Travelog: End-to-End Destination guide**

Technologies: HTML, CSS, JavaScript, Bootstrap, MongoDB, Node.js, Express.js, Cloud
It's an End-to-End destination guide where we can search for hotels, rooms and PG's which are available and their locations and contact details will be provided for booking purpose, and there is also a separate rating and review section. It also has features to add, delete and edit Listings after authentication.

This project implements:

- MVC framework
- Authentication and Authorization
- CRUD operations
- Map API

❖ **Global-Chat: Real-time Chat Application**

Technologies: HTML, CSS, JavaScript, MongoDB, Node.js, Express.js, Socket.io

In every online games like Clash of Clans, PUBG etc.. there will be separate section called global chat where every person in the region will have a common communication line where each and every person who are active can send messages and read others messages.

This project implements the same mechanism where each active users will get notification when a member messages or joins or leaves the chat which are implemented using Socket.io. In the left section there will be list of users who are currently in the group and active. Messages will never be stored in database instead only usernames are stored which will also be deleted when they leave the chat.

❖ **Simon Game**

Technologies: HTML, CSS, JavaScript

Simon Game is the digital version of the famous “Simon Says” game. This project is purely based on JavaScript and uses concepts like: Selectors, Nested functions, SetTimeout and many more.

❖ **Weather App**

Technologies: React.js, HTML, CSS, JavaScript

It is a mini react project which displays weather based upon the city we search for, by using OpenWeather API.
